Acer is the second largest manufacturer of laptops in the world, ahead of Toshiba, Dell and Lenovo, and is the largest manufacturer in Europe, the Middle East, and Asia.

These notebooks are tough! They beat out Dell and Toshiba in CMP's Notebook Abuse Test (they were pulled off a desk by the power cord, dropped 3.5 feet to the floor, had four ounces of cola poured into the keyboard and rolled down a flight of stairs.)

Only the Acer Laptop and Panasonic Toughbook survived all four tests. (HP and Lenovo refused to take part.)

Move up to workstation class power - fast CPU and power video card for gamers or creators!

Why SSD?	Solid State Drives (SSDs) have no moving parts, making them 5 to 31 times faster than a mechanical drive. Windows 10 only runs well with a fast hard drive, so unless you're a very patient person, never run it on a mechanical hard drive. SSDs come in three flavours, with SATA (5.5 times faster than mechanical), M.2 (9.5 times faster), and NVME (an incredible 31 times faster).
What is IPS?	IPS (In-Plane Switching) screens give better colour and viewing angles than TFT screens.
Why HDMI?	HDMI ports allow you to connect your laptop to a big screen TV or projector with just one cable.
Why USB 3.0?	USB 3.0 has the same connection as the older USB 2.0 and 1.1 that we're used to, and older USB devices work fine in USB 3.0 ports, but plug a USB 3.0 device in a USB 3.0 port and watch those files fly - USB 3.0 (4800Mbps) can transfer files almost 10 times faster than USB 2.0 (480Mbps.)
What is USB-C?	With a new connector, USB-C gives you up to twice the speed of USB 3.0 and a simple connector that plugs in either way (so you don't have to keep flipping that darn connector).
